

Water Problem Signs

No matter if you have a leaky basement, wet crawl space or a damp basement, understanding and identifying the signs of potential water problems is a key to having your problems solved by a waterproofing contractor. An ECP Interior Waterproofing System may be what you need. From wall cracks, slab floor cracks and block wall ruptures, water infiltration causes high humidity and poor indoor air quality not only in your basement or crawl space but throughout your home.

Check your basement or crawl space for the following:

Basement

- Walls leaning in or out
- Bowed walls
- Cracks in the poured or block walls
- Water leakage through cracks at base of walls
- Cracked floors
- waterproofing
- Water stains on floors and walls

Crawl Space

- Cracks in the foundation
- Bowing walls
- Tilting or leaning walls
