

PUSH PIER SYSTEM

Earth Contact Products: Providing You
The Very Best Solution for Your Foundation Problems

WHAT CAUSES YOUR FOUNDATION TO SETTLE

EVAPORATION: Hot and dry conditions may cause soil to pull away from the foundation. Settlement due to this foundation moisture imbalance could cause areas to crack.

TRANSPIRATION: Tree roots could dehydrate the soil beneath a home causing soil shrinkage.

DRAINAGE: Improper drainage will lead to excess moisture build up, which could erode or consolidate soils. Excessive moisture may cause heaving of expansive soils.

PLUMBING LEAKS: Leakage from plumbing systems often serves as a primary instigator of foundation issues, such as upheaval.

SITE PREPARATION: Lack of site preparation may result in unforeseen shifts in the soil beneath the foundation.

SIGNS OF FOUNDATION FAILURE

Interior

- Cracks in drywall
- Sticking doors and windows
- Misaligned doors and windows
- Misaligned trim or molding
- Water leakage at wall base

Exterior

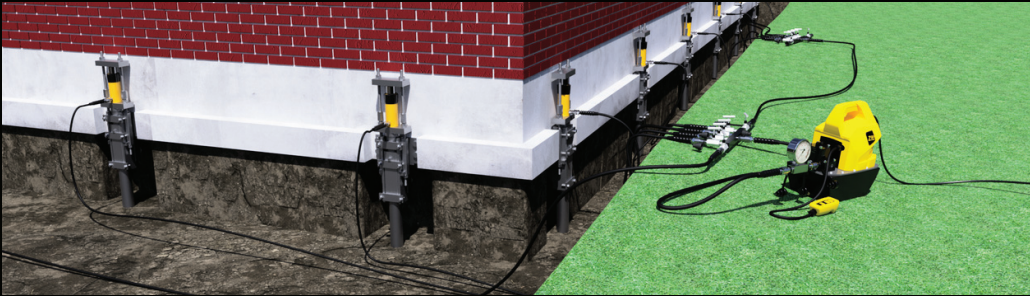

- Cracks in brickwork
- Gaps around doors and windows
- Fascia board separation
- Leaning chimneys

Basement

- Foundation leakage
- Wall cracks
- Bowing walls
- Sinking foundation
- Leaning walls

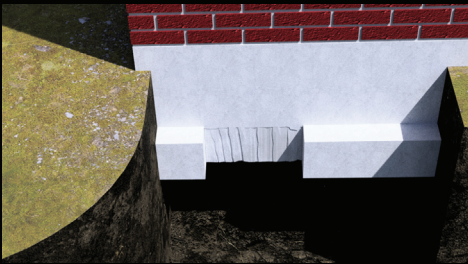

THE SOLUTION: THE STEEL PUSH PIER SYSTEM

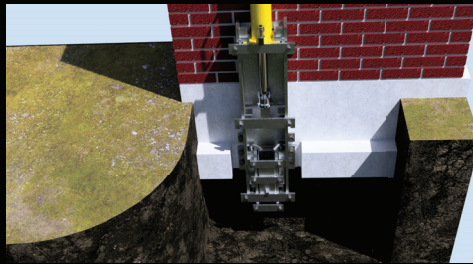

The ECP Steel Push Pier System is a permanent solution for your home's settling foundation. It provides you the very best option to repair your foundation back to level. Steel piers are hydraulically driven to a load bearing stratum, as the entire structure works as the reaction.
